Digital Forensics

GARDAWORLD PROVIDES
DOCUMENTED
EVIDENCE - FROM THE
HARD DRIVE TO THE
DATA CENTER - FOR
LITIGATION SUPPORT IN
DIGITAL ABUSE CASES.

Law enforcement agencies report that employee theft is a fast growing crime. In this fast-paced world of business, Digital Forensics has become a major support tool for many investigations, such as fraud, harassment, or ID theft. Consequently, a company's internal litigators and general counsel require specialists with unique skills to uncover comprehensive forensic evidence so they can take action against perpetrators on behalf of their clients or organizations.

What GardaWorld provides

The Digital Forensics service from GardaWorld provides a comprehensive, quality litigation support solution that correctly documents legal evidence for organizations that want to take action against perpetrators. Developed specifically to take advantage of the long history of intelligence expertise from major law enforcement agencies, and military — as well as a highly skilled team of IT experts and forensic scientists — the GardaWorld Digital Forensics service provides documented evidence — from the hard drive to the data center — for litigation support in digital abuse cases.

Emphasizing quality and efficiency, while leveraging proven techniques, the GardaWorld Digital Forensics service protects corporate assets and image, helps to ensure that evidence will stand up in court, increases the expertise of the legal and security teams, and lowers overall costs.

Intellectual property theft costs
750,000 jobs per year.

Features

24 X 7 EMERGENCY INCIDENT RESPONSE — provides immediate instruction and consulting for preserving evidence over the phone and immediate response on the scene.

DIGITAL INVESTIGATION CONSULTING — provides an understanding of the process of Digital Forensics, the role it plays in investigations, the requirements for collecting evidence that's legally admissible, and what to expect during the process.

DIGITAL FORENSICS INVESTIGATION — takes advantage of skilled technicians who use specially developed tools and techniques to search for particles of data and patterns of usage, analyze data from network usage, and uncover patterns that are court-tested and proven to be admissible in court. Methodical procedures that make a copy of the entire hard drive or database and preserve it are employed to create an exact digital replica for analysis.

ELECTRONIC DISCOVERY — provides macro and micro analysis of all documents, emails, and images to uncover suspicious activity.

DATA CAPTURE AND EVIDENCE PRESERVATION — captures relevant data and preserves as evidence from the moment of response until the end of the investigation to help ensure the integrity of the case.

LITIGATION SUPPORT — provides documented evidence, expert witness testimony, and consultation with the legal team.

Benefits

ENSURE EVIDENCE WILL STAND UP IN COURT — by deploying a team of highly trained and experienced professionals and a methodical approach based on years of experience and “intelligence” to preserve evidence, GardaWorld helps you to ensure that evidence and expert witness testimony will stand up in court.

LOWER OVERALL COSTS — you benefit from a range of comprehensive services that cover all of your physical and digital needs with no hidden costs. GardaWorld delivers highly competitive pricing with more service value for low-entry cost than any of its competitors. This is made possible by up-front fees and hiring highly trained, senior professionals who are extremely efficient at uncovering evidence in computer forensic investigations.

PROTECT CORPORATE ASSETS AND IMAGE — GardaWorld understands how to discreetly investigate security breaches without arousing internal or external scrutiny or suspicion. Comprehensive services correlate disparate sources of security information from across the enterprise and beyond. From this information the team gathers forensic-quality evidence that enables you to take action against perpetrators stopping them before they can attack again. The result: your organization avoids the loss of revenue, time to market, jobs, and competitive advantage, while ensuring that your reputation and image remain strong in public markets.

SUPPLEMENT THE EXPERTISE OF INTERNAL SECURITY TEAMS — today, litigators and general counsel within organizations need specialists with unique skills to uncover and collect evidence both within and outside of the business so they can effectively prosecute perpetrators. GardaWorld consults with you to supplement the expertise of your legal and security teams, allowing you to expand your scope and abilities without adding more staff.
